

Superconducting Accelerator Fellowships

Niowave is a world leader in developing superconducting accelerators for research, medical, defense and industrial applications. Our staff collaborates with laboratories at the Department of Energy, Department of Defense, and leading universities. We have ongoing research with the Relativistic Heavy Ion Collider, the US Navy Free Electron Laser Program, the Large Hadron Collider, the International Linear Collider, advanced light sources and many other leading accelerator systems.

Niowave offers 2 year research fellowships for qualified accelerator physicists and engineers with an opportunity for a permanent position. Those interested in joining the only company in the world that designs, builds, and tests complete superconducting systems—send CV and statement of research interests to Dr. Terry Grimm at **research@niowaveinc.com**. For more information visit **www.niowaveinc.com**.
